30th of September 2022

*This document is the audit of Spitz Chain smart contract performed by SMCAuditors.*

### 1. Executive Summary

Spitz Chain is a development of NFT, GameFi and DeFi for users in the SPC ecosystem. Spitz Chain Token is a BEP20 token. This report was written to provide a security audit for Spitz Chain (<https://spitzchain.io>) Binance Smart Chain smart contract. SMCAuditors conducted the audit focusing on whether Spitz Chain Token smart contract is designed and implemented without any security vulnerabilities. The contract is listed below with its link.

- <https://bscscan.com/address/0xC46159BE6699f8F74D39231c021529CD98e0D788>

We have run an extensive static analysis of the codebase as well as standard security assessment utilizing industry-approved tools. There are no critical/high-level issues with the currently deployed token contract. Our low-level and medium-level findings are available in the next section.

## 2. Audit Findings

### Low Level Findings

- ❖ Contract ownership is not renounced. Consider renouncing ownership after presale.

## 3. Conclusion

In this audit, we thoroughly analyzed the Spitz Chain smart contract and found no critical/high-level issues.

✓	No critical issues found
✓	Contract owner cannot mint
✓	Contract cannot be locked
✓	Tokens cannot be burned
✓	Tokens except presale custody are locked
✓	Contract cannot be manipulated by owner functions

## 4. Disclaimer

This report is not advice on investment, nor does it guarantee the adequacy of a business model and/or a bug-free code. This report should be used only to discuss known technical problems. It will be necessary to resolve addressed issues and conduct thorough tests to ensure the safety of the smart contract.
