15th of October 2022

This document is the audit of Spacen smart contract performed by SMCAuditors.

1. Executive Summary

Spacen is a Web3 Utility app that allows users to earn reward while using the mobile app. This report was written to provide a security audit for Spacen (<https://spacen.app/>) Ethereum smart contract. SMCAuditors conducted the audit, focusing on whether token smart contract is designed and implemented without any security vulnerabilities. The contract is listed below with its link.

- <https://etherscan.io/address/0x895917741dD920393A915B3184Bb374E9810A441>

We have run an extensive static analysis of the codebase as well as standard security assessment utilizing industry-approved tools. There are no critical/high-level issues with the currently deployed token contract. Our low-level findings are available in the next section.

2. Audit Findings

Low Level Findings

- ❖ Token ownership is not renounced. Consider renouncing ownership.
- ❖ Token owner can blacklist users. Consider removing this admin function.
- ❖ Token owner can set min/max wallet limits. Consider removing this admin function.

3. Conclusion

In this audit, we thoroughly analyzed the Spacen smart contract and found no critical/high-level issues.

✓	No critical issues found
✓	Contract owner cannot mint
✓	Contract owner cannot set fees for than 10%
✗	Contract can be manipulated by some owner functions
✓	Contract cannot be locked
✓	Tokens are party locked
✗	Ownership/Operator is renounced

4. Disclaimer

This report is not advice on investment, nor does it guarantee the adequacy of a business model and/or a bug-free code. This report should be used only to discuss known technical problems. It will be necessary to resolve addressed issues and conduct thorough tests to ensure the safety of the smart contract.
